INDEX

Note: Page numbers followed by f refer to figures; page numbers followed by t refer to tables.

A
Abdominal compartment syndrome, with multiple trauma, 23
Acetabular artery, 103–104
Acetabular fractures, 196–198, 197f, 198f, 198f
anesthetic considerations for, 197–198
classification of, 196
patient profile and, 196
treatment options for, 196–197
Acetabulofemoral impingement, 107
Acetaminophen, following pediatric spine surgery, 150
Achilles' tendon repair, 235
Achondroplasia, pediatric, 69, 70
Acute lung injury (ALI), 13, 22
in fat embolism syndrome, 54
Acute normovolemic hemodilution (ANH), for pediatric spine surgery, 146
Acute renal failure (ARF), in fat embolism syndrome, 54
Acute respiratory distress syndrome (ARDS), 13, 22
Adhesive capsulitis, 87
interscalene block with, 299
Agitated patients, respiratory management for, 15
Airway management, with multiple trauma, 14–15, 19–20
Ambulation, following shoulder surgery, 89
Amputation
below-knee, 131–132
of foot, 131
Symes, 131
of toes, 131
transmetatarsal, 131
transtibial, 131–132
Analgesia
in cerebral palsy, 68
following continuous spinal analgesia, 383
with multiple trauma, 23
for spinal surgery, adult, 160
lumbar, 175
thoracic, 168
Anesthetic induction, for pediatric spine surgery, 144
Anesthetized patients, nerve blocks in, nerve injury and, 409–410
Ankle, sports injuries to, 233–235
Achilles' tendon repair for, 235
arthroscopic treatment of, 233–234
lateral ankle reconstruction for, 234
peroneal tendon exploration for, 235
Ankle block, 353–356
agent selection for, 356
anatomy and, 353–356
functional neuroanatomy, 355
gross, 353, 354f, 355f
surface, 356
in children, 396–397
patient positioning for, 356
patient selection for, 353
problems and complications of, 356
single-injection, 356
timing of, 356
Ankle clonus test, for pediatric spine surgery, 149
Ankle fractures, 207f, 207–208
anesthetic considerations for, 208
classification of, 207
treatment of, 207–208
Ankle surgery, 134–136
anatomy and
developmental, 134
nerve supply and, 126–127
surgical, 134
anesthetic considerations for, 136
arthrodesis, 135
arthroplasty, 134, 135f
complications of, 136
external fixation and, 135
patient positioning for, 136
postoperative protocol for, 136
supramalleolar osteotomy, 136
Anterior cervical decompression and fusion (ACDF), 157f, 157–158, 158f, 178
Anterior instrumentation, 178
Anterior release, 178
Anterolateral approach, modified, to hip joint, 105
Antibiotics. See also infection prophylaxis
for hip arthroscopy, 113
Anticoagulants. See also specific drugs and drug types
pharmacology of, 41–44
Apoptosis, nerve damage and, 407
Aprotinin
for fat embolism syndrome, 57
for pediatric spine surgery, 148
Arachnoid mater, 374
Arterial blood gases (ABGs), in fat embolism syndrome, 55
Arterial puncture, with axillary brachial plexus blocks, 329
Arthritis
glenohumeral epidemiology of, 82
etiology of, 81–82
inflammatory, of hip, 107
osteoarthritis of hip, 106
osteoarthritis of knee, 118–122
arthroplasty for, 119–122
early treatment for, 120–121
etiology and epidemiology of, 118–119
pathophysiology of, 119
rheumatoid, of foot, 130
septic, of foot, 131
wrist surgery for, 99–100
INDEX

Arthrogryposis syndromes, 72–73
Arthroscopic repair
for ankle joint injuries, 233–234
of rotator cuff, 222, 222f
for shoulder instability, 217–218
Arthroscopic subacromial decompression (ASAD), 86, 221
Aspiration risk, in dysmorphic children, 62
Aspirin, for venous thromboembolism prophylaxis, 40
Axillary vein, 322
Axillary nerve, 323, 325
Axillary blocks, 276. See also Brachial plexus blocks, axillary
in children, 387–388
infravascular approach for, 388
perivascular approach for, 387–388
supraclavicular approach for, 388–389
transarterial pathophysiology of, for, 388
Axillary nerve, 325, 325
lesions of, 413–414
surgical anatomy of, 83
Axillary vein, 322
B
Baclofen, in cerebral palsy, pediatric, 68
Bacterial colonization, of catheters for Baclofen, 68
Axillary artery, 322–323, 325
Axillary artery, 322
Axillary blocks, 276. See also Brachial plexus blocks, axillary
in children, 387–388
Bier block, 187
Biological warfare, injuries due to, 430
Blood
aspiration from catheter, with continuous peripheral nerve block, 279
intraoperative salvage of, for pediatric spine surgery, 146–147
Blood donation, preoperative, for pediatric spine surgery, 146
Blood loss, thoracic spinal surgery and, 168
Blood transfusion for multiple trauma, 16
techniques to limit, with pediatric spine surgery, 146–149
Bone, heterotopic formation of, 74
Bone dysplasias, 73–74
Bone, heterotopic formation of, 74
Bone cement. See Methylmethacrylate (MMA)
Bone dysplasias, 73–74
Boundary-defining muscles, infravascular brachial plexus blocks and, 315, 315f
Brachial artery, 322
Brachial plexus anatomy of
gross, 291, 292f
surgical, 82
cords of
anatomy of, 291, 292–294f,
313–314, 314f, 315f
compartments of blocks of, 318
lesions of, 413
medial block of, 311–312
stability in relation to other anatomy, 316–317
subdivision of, 317
injuries of, 412–413, 413f
roots of
anatomy of, 291, 292–294f, 293
lesions of, 412–413, 413f
stimulation of, 291–293, 292–294f
trunks of
anatomy of, 291, 292–294f, 313
stimulation of, 294
ultrasound imaging of, 284–287, 285f–287f
Brachial plexus blocks
above clavicle, 291–308. See also Cervical paravertebral block;
Interscalene block;
Supravacular block
anatomy and, 291–295, 292f,
292f–294f
trunk of, 294–295
axillary, 321–329
agent selection for, 328, 328f
catheter placement and fixation for, 328
contraindications to, 325
functional anatomy and, 324–325
gross anatomy and, 322–323, 323f
historical background of, 321–322
indications for, 325
patient positioning for, 325
problems with, 328–329
procedure for, 325–328, 326t
special considerations with, 329
surface anatomy and, 323–324, 324f
in children, 386–390
axillary approach for, 387–388
brachial plexus anatomy and, 386–387
infraclavicular approach for, 388
supraclavicular approach for, 388–389
transarterial approach for, 388
for elbow surgery, 95
infraclavicular, 276, 311–319
agent selection for, 318–319
of brachial plexus cords, 311–312
of brachial plexus divisions, 311
brachial plexus sheath and, 314–317, 315f, 316f
of brachial plexus terminal branches, 312
complications of, 318–319
continous, 318
gross anatomy and, 313–314, 314f, 315f
injection of one or multiple cords for, 318
single-injection, 317–318
special considerations with, 319
superior approach to, 312–313, 313t
surface anatomy and, 317
technique for, 317–318
for wrist surgery, 101
Brain injury, 12–13
Brooks wiring technique, 178
Bunions, 128–129
Bupivacaine
for ankle blocks, 356
for axillary brachial plexus blocks, 328f
for cervical paravertebral block, 302
for continuous neuraxial anesthesia, 378f, 378–379, 379f
for femoral nerve block, 340
following pediatric spine surgery, 152f, 153f
for interscalene block, 297–298
metabolism and system toxicity of, 240
for sciatic nerve blocks, 351
for spinal anesthesia, 383
for supravacular block, 308
Butorphanol, following pediatric spine surgery, 152f
C
Calcaneal nerves, medial, 127
Camptomelic dysplasia, 70f
Cardiac output, trauma and, 11
Cardiovascular disorders
in dysmorphic children, 66
in muscular dystrophy, 69
with scoliosis, 143
Cardiovascular system, trauma and, 11
Carpal tunnel release, 183–184
Carpometacarpal joint, of thumb,
ligament reconstruction and tendon
interposition arthroplasty for,
181–182
Catecholamines, trauma and, 9
Caudal block
Cauda equina syndrome, with
Cerebrospinal fluid (CSF), 375, 375
Central venous catheters, with multiple
Cement implantation syndrome,
Cefazolin, for surgical prophylaxis,
Cavovarus foot, 133–134
Cerebrospinal fluid (CSF), 375, 375
Compartment syndromes
Combative patients
Combined spinal epidural technique,
Combined spinal epidural technique,
Continuous spinal epidural technique,
Continuous spinal and epidural
Continuous peripheral nerve blocks,
Continuous cervical paravertebral block
Continuous cervical paravertebral block
Continuous epidural anesthesia,
Continuous epidural anesthesia,
Continuous epidural anesthesia,
Continuous peripheral nerve blocks,
Continuous peripheral nerve blocks,
Continuous peripheral nerve blocks,
Continuous spinal and epidural
Continuous peripheral nerve blocks
in children, 387–389
in children, in children, 389
Cefazolin, for surgical prophylaxis,
Cement implantation syndrome,
Central venous catheters, with multiple
Cerebral palsy, pediatric, 67–68
Cerebrospinal fluid (CSF), 375, 375f
spread of anesthetic solutions in,
380f, 380–381
Cervical decompression and fusion,
anterior, 157f, 157–158, 158f, 178
Cervical instability
adult cervical spine surgery and, 161
in dysmorphic children, 63, 64f–65f, 65
Cervical paravertebral block, 300f,
300–304
agent selection for, 302
anatomy and, 301, 301f
indications for, 301
problems and complications of,
302–304
single-injection and continuous block
neurolytic technique for, 302, 303f
special considerations with, 304
Cervical spine, adult. See Spine, adult,
cervical
Cervical stenosis, adult cervical spine
surgery and, 161–162
Charcot-Marie-Tooth disease, foot
deformities and, 126
Chemical injury, of nerves, 407
Chemical warfare, injuries due to, 430
Children
continuous peripheral nerve block
strategies for, 277, 277t
hand surgery in, 184–185, 186f,
187, 187f
syndactyly reconstruction, 184–185,
185f
infraclavicular blocks in, 319
Legg-Calvé-Perthes disease in, 107
peripheral nerve blocks for, 385–399
caudal block as, 397–399
for lower extremity, 390–397
methods for prolonging duration of,
397
methods to improve accuracy of,
385–386
for upper extremity, 386–390
spine of. See Spine, pediatric
Clonidine, 242
Clindamycin, for surgical prophylaxis, 32
Clean wounds, 30
Clean/contaminated wounds, 30
Circumferential spinal fusion, 179
Circumflex artery, medial, 104
Clean/contaminated wounds, 30
Clean wounds, 30
Clindamycin, for surgical prophylaxis, 32
Clonidine, 242
for continuous neuraxial anesthesia, 380
following pediatric spine surgery, 153f
for peripheral nerve blocks in
children, 397
Clotting, control of, 37–38
Coagulation
intravascular, disseminated, in fat
embolism syndrome, 54–55
trauma and, 9
Coagulation pathway, 37
Collateral ligament
lateral, reconstruction of, for knee
injuries, 231
medial, reconstruction of, for knee
injuries, 230–231
Combative patients
mechanical ventilation for, 16
respiratory management for, 15
Combined spinal epidural technique,
advantages of continuous spinal
anesthesia over, 382–383
Compartment syndromes
abdominal, with multiple trauma, 23
with fractures, 209–211
diagnosis of, 210
etiology of, 209–210
pathophysiology of, 210
treatment of, 210–211, 211f
Complement, trauma and, 9
Computed tomography (CT)
of brain, in fat embolism syndrome, 55
of lungs, in fat embolism syndrome, 55
Conjoined tendon, surgical anatomy of,
83
Contaminated wounds, 30
Continuous cervical paravertebral block
(CCPVB), 86–87
Continuous epidural anesthesia,
advantages of continuous spinal
anesthesia over, 382
Continuous peripheral nerve blocks,
257–263, 265–279
catheter care for, 265
catheter removal and, 265, 268f,
268–269
in children, 397
infusion strategies for, 269–277
general principles for, 269,
270–275f
in lower limb, 276–277
pediatric, 277, 277f
in upper limb, 269, 276
patient selection for, 265, 266–267f
problems with, 278f, 278–279
typical periods of usage for, 268–269
Continuous regional techniques, for
foot surgery, 127–128
Continuous spinal anesthesia. See also
Neuraxial anesthesia, continuous
advantages over continuous epidural
epidural technique, 382–383
advantages over continuous epidural
techniques, 382
benefits of, 382
equipment for, 375–376
postoperative analgesia

INDEX

Diuretics

Disseminated intravascular coagulation

Dirty/infected wounds, 30

Cutaneous nerve, antebrachial, 98

Cryostat test, in fat embolism syndrome, 55

Digits

Diagnostic arthroscopy

Diabetic foot problems, 126, 130–132

Dextrose, for continuous neuraxial anesthesia, 380

Dextran, for venous thromboembolism prophylaxis, 40

Dexmedetomidine, following pediatric spine surgery, 147

Desirudin, pharmacology of, 43, 44

Dens screws, 178

Desirudin, pharmacology of, 43, 44

Desmopressin acetate (DDAVP), for pediatric spine surgery, 147

Dexametomidine, following pediatric spine surgery, 150–151

Dextrans, for venous thromboembolism prophylaxis, 40

Dextrose, for continuous neuraxial anesthesia, 380

Diabetic foot problems, 126, 130–132

Diagnostic arthroscopy for knee injuries, 223–224

of shoulder, 216–217

Digits

fifth, infracavicular brachial plexus blocks and, 317

syndac tally reconstruction and, 184–185

thumb

duplication of, 185, 186f, 187, 187f

hypoplasia of, 185, 186f

ligament reconstruction and tendon interposition arthroplasty for, 181–182

Dirty/infected wounds, 30

Disseminated intravascular coagulation (DIC), in fat embolism syndrome, 54–55

Diuretics

with multiple trauma, 18–19

osmotic, for traumatic brain injury, 13

Dopamine, renal protection and, 18

Double-lumen endotracheal tubes, for anterior approaches to pediatric spine surgery, 145

Down's syndrome, 71, 72f

Duchenne muscular dystrophy, 68–69, 69f

Dural laceration

with adult cervical spine surgery, 162

with thoracic spinal surgery, 169

with thoracic spine surgery, 177

Dura mater, 374

Dural laceration

Dysmorphic syndromes, pediatric, 61–76

aspiration risk with, 62

associated conditions in, 66–67

of bone, 73–74

cerebral palsy as, 67–68

cervical instability in, 63, 64f–65f, 65

difficult airway and, 65

HIV infection and, 75–76

of joints, 72–73

malignant hyperthermia in, 65f, 66–66, 66f

of muscle, 68–69

neurologic, 74–75

tourniquets with, 62–63

Dysphagia, with adult cervical spine surgery, 162–163

Dyspnea, with cervical paravertebral block, 302

E

Elastic stockings, graded, for venous thromboembolism prophylaxis, 40

Elbow, 91–96

biomechanics of, 91

intraarticular fractures of, 191, 192f, 193

anesthetic considerations for, 193

classification of, 191

treatment of, 193

nerve blocks at, in children, 389–390

median nerve, 389

musculocutaneous nerve, 389–390

radial nerve, 389

ulnar nerve, 389

surgical anatomy of, 91–92, 92f

surgical operations of, 92–96

anesthetic considerations for, 94–95

arthroplasty, 94, 94f

common basic procedures, 93–93

complex procedures, 93–94

patient positioning for, 92–93

postoperative protocol for, 96

tourniquets for, 93

Elbow arthroplasty, 94, 94f

Electrical nerve stimulation. See Neurostimulation

Electrocardiogram (ECG), in fat embolism syndrome, 55

Electromyography, 411–412

Electrophysiologic monitoring, for pediatric spine surgery, 149–150

Endobronchial intubation, for anterior approaches to pediatric spine surgery, 145

Endocrine system, trauma and, 13–14

Endoneurium, 412

Endotracheal intubation

in dysmorphic children, 63

with multiple trauma, 14, 15, 19, 20

in myositis ossificans, 74

Endplates, pediatric, 139

Enoxaparin, for venous thromboembolism prophylaxis, 44

Environmental issues, battlefield injuries and, 430, 431f

Epidural anesthesia

continuous. See also Neuraxial anesthesia, continuous equipment for, 376

historical background of, 372

Epidural space, 374

spread of anesthetic solutions in, 381

Epidural spread, with lumbar paravertebral block, 368

Epinephrine, 242

for continuous neuraxial anesthesia, 379

contraindication for ankle blocks, 355

Epineurium, 405

Epsilon-aminocaproic acid (EACA), for pediatric spine surgery, 147–148

Erb-Duchenne plexus paralysis, 412

Esophageal perforation, with adult cervical spine surgery, 163

Etidocaine, for continuous neuraxial anesthesia, 379

Extensor mechanism failure, with knee arthroplasty, 123

Facet joints, pediatric, 139

Fascia iliaca compartment block, in

Facial nerve block, 302

Fascial compartments

Fascial spaces

Fasciotomy, palmar and digital, 182–183

Fat embolism syndrome

with multiple trauma, 14, 15, 19, 20

in myositis ossificans, 74

Fat embolism (FE), 51–57

clinical presentation of, 53–55

of fulminant form, 54–55

of nonfulminant form, 53–54

of subclinical form, 53

diagnosis of, 55–56

following hip arthroplasty, 112

historical background of, 51

incidence of, 51

pathology of, 51–52
Fondaparinux

Fluid restoration, for fat embolism syndrome, 56

Fondaparinux pharmacology of, 43

for venous thromboembolism prophylaxis, 44

Foot joints, 127

Foot surgery, 125–136

for adult-acquired flatfoot deformity, 132–133

anesthetic management for, 127–128

applied anatomy and, 126–127

benign and malignant lesions and, 126

for bunions/hallux valgus, 128–129

for diabetic foot problems, 130–132

for forefoot deformities and rheumatoid arthritis, 130

for hammer toes and metatarsalgia, 129–130

for cavovarus foot, 133–134

neuromuscular disorders and, 126

patient positioning for, 128

preoperative considerations for, 125–126

tourniquets for, 128

Trauma for, 129

Fractures, 189–212

compartment syndromes and, 209–211

crush injuries and, 211–212, 212f

lower extremity, 194–202, 199

proximal humeral, 189–191, 190

tibial, 206–207

of hip, 198–202, 199f, 201f

turban ring, 194f, 194–196

tibial, 206–207

open, 208–209

upper extremity, 189–193

of elbow, intraarticular, 191, 192f, 193

forearm, 193

humeral shaft, 191

proximal humeral, 189–191, 190f

Free fatty acids, in fat embolism pathophysiology, 52–53

Frozen shoulder, 87

interscalene block with, 299

G

Gallie wiring technique, 178

General anesthesia for battlefield injuries, 433–436, 434f, 434f, 436f

for hip arthroplasty, 111

for knee arthroplasty, 122

Genitofemoral nerve, 361

Gentamicin, for surgical prophylaxis, 32

Glenohumeral joint, surgical anatomy of, 83, 83f

Gluteal nerves, 104

lesions of, 416

H

Hall frame, 141

Hallux valgus, 126–129

Hammer toes, 129–130

Hand surgery, 181–187

ligament reconstruction and tendon interposition arthroplasty for thumb, 181–182

palmar and digital fasciotomy, 182–183

carpal tunnel release, 183–184

pediatric, 184–185, 186f, 187, 187f

syndactyly reconstruction, 184–185, 185f

trigger finger release, 184

Harrington rods, 141, 141f

Headache, postdural puncture, 381

Heart, in fat embolism syndrome, 54

Hematologic disorders, in dysmorphic children, 67

Hematomas with auxiliary brachial plexus blocks, 329

with lumbar paravertebral block, 369

of spinal canal, with adult cervical spine surgery, 163

Hemodilution, normovolemic, acute, for pediatric spine surgery, 146

Hemodynamic management, with multiple trauma, 17

Hemoglobin, fall in, in fat embolism syndrome, 57

Hemorrhage, nerve injury associated with, 407–408

Hemostasis, normal, 37–38

Heparin

for fat embolism syndrome, 57

low molecular weight pharmacology of, 42–43

vertebral canal hematoma with, 47

unfractionated pharmacology of, 42

vertebral canal hematoma with, 47

Hereditary sensory and autonomic neuropathies (HSAN), 74, 75

Hip arthroplasty, 108–113

anesthetic considerations for, 111–112

indications/patient profile for, 108

methylmethacrylate cement for, 421–424

cemented versus noncemented hip arthroplasty and, 424

cement implantation syndrome and, 423–424

chemistry of, 421–422

physiologic and pharmacologic effects of, 422–425
Hip arthroplasty (Cont.):
“minimally invasive” versus
“standard,” 105–106
patient positioning for, 108–109
postoperative protocol for, 112–113
complications of and, 112–113
surgical technique for, 109–111
antibiotics for, 111
comorbidities and, 110–111
heterotopic ossification and, 111
primary, 109f, 109–110
revision, 110
thromboprophylaxis for, 111
venous thromboembolism prophylaxis for, 44
Hip arthroscopy, 113
Hip dislocation, following hip arthroplasty, 112
Hip dysplasia, 106–107
Hip fractures, 198–202, 199f
anesthetic considerations for, 202
classification of, 200
patient profile and, 200
treatment of, 200–202, 201f
Hip fracture surgery (HFS), venous thromboembolism prophylaxis for, 45
Hip joint, adult, 103–113
anatomy of, 103
arthroplasty of, 108–114
arthroscopy of, 113
biomechanics of, 106
